Dr Milne also read the following note on shells contained in the King-Edward shell-bed:—

The following list of 37 species exhibit a large percent.

age of high northern forms, 15 being no longer resident in Scottish waters, the remaining shells, such as *Tellina balthica*, having the northern habit. The asterisk * indicates those species which are locally extinct:—

Aporrhais pes-pelecani, *Buccinum undatum*, *Dentalium entalis*, *Dentalium tarentinum*, *Fusus antiquus*, *Fusus propinquus*, *Lacuna divaricata*, **Mesalia erosa*, **Mesalia reticulata*, *Nassa incrassata*, *Natica alderi*, **Natica affinis*, *Natica islandica*, *Natica greenlandica*, **Pleurotoma bicarinata*, **Pleurotoma pyramidalis*, **Pleurotoma scalaris*, **Pleurotoma harpularia*, *Pleurotoma turricula*, *Pleurotoma trevelliiana*, **Scalaria greenlandica*, **Trophon gunneri*, *Turritella terebra*, **Astarte borealis*, *Astarte compressa*, **Cardium greenlandicum*, **Cardium islandicum*, *Cardium echinatum*, *Cyprina islandica*, **Leda limatula*, **Leda lucida*, *Mya truncata*, *Mytilus edulis*, *Pholas crispata*, *Saxicava rugosa*, *Tellina balthica*, **Tellina calcarea*.

On the motion of Sheriff Scott Moncrieff, a cordial vote of thanks was passed to Mr Bell for his able paper, and for his generous offer to send typical shells for the Museum, and to assist with information those who were engaged in like inquiries.

Cordial votes of thanks were also passed to Dr Milne and to the Chairman.
